MONGOLATA GOLD BATTERY HISTORICAL
REVIEW AND SUMMARY OF ORE TREATED
AND GOLD RECOVERED 1933-1954.

ABSTRACT

From commencement of crushing in March 1933 to its closure in 1954, the Mongolata Government Battery crushed a total of 7600 tonnes of ore for a recovery of 318.250 grams of gold bullion from battery and cyanide treatment. Average gold yield was 41.875 grams/tonnes.

Although not all of the ore mined at the Mongolata Goldfield was treated by this battery, only two of the parcels treated were mined elsewhere, namely Ulooloo Goldfield.

INTRODUCTION

This report as part of an ongoing review of gold mining activities within the state of South Australia contains complete records of ore treated and gold bullion recovered by amalgamation and cyanidation at Mongolata Battery, as well as bullion smelted and an evaluation of the amount of gold in tailings.

LOCATION

Mongolata Government Battery was erected in late 1932 on Part Section 36E. Hundred of Mongolata. This is sited approximately 26 kilometres by road North-East of Burra, at the foot of the eastern escarpment of the Mongolata Hills, in South Australia's Mid-North Region. Land surrounding the battery, a bore and connecting pipeline was gazetted as a new section (Sec. 139) comprising 2.428 Ha, in the Government Gazette dated 31.6.34, page 1329, and dedicated as a Government Battery Reserve. This section was disposed of as freehold land in December 1966 to Mrs J.R. White of Burra.

HISTORICAL REVIEW

Late in 1930 Henry A. Byles, a drover employed by I.J. Warnes at Burra, discovered gold on Section 36 W., in the Hundred of Mongolata. He immediately acquired an 18 acre (7.28 Ha) claim around the site and commenced mining. In his report in Min. Rev. Adelaide 53 the Chief Inspector of Mines, Mr L.J. Winton stated that by February 1931 there were over 50 men engaged in working or prospecting on the field and by Mid-1931 a number of rich parcels of ore had been treated by the Peterborough Battery e.g. 7.5 tonnes of ore from Byles mine returned 1.334 kg of gold. The need for crushing facilities on the field soon became obvious, the cost of transporting ore to Peterborough at that time being relatively expensive, at about 20/- (\$3) per ton, and in Min. Rev. Adelaide 54, the Government Geologist L. Keith Ward stated this fact and suggested the erecting of a Government Battery at the goldfield. Initially, lack of water presented a problem, but by Mid-1932 it was reported that a bore put down by the Byles Mongolata Gold Mining Company had been acquired and a pumping test had shown it to be adequate for battery and cyanide

purposes; the ground necessary for a battery site had been purchased and work had begun on erection of the plant.

The ten-head stamp battery and cyaniding plant built for a cost of £3393 (\$6786) was officially opened on 2nd March 1933 by the Premier of South Australia, Mr Richards. It operated for almost 20 years, the 373rd and last parcel being treated on the 27th February, 1952. The Battery was closed in 1954, the surplus materials being auctioned on the 10th March 1954 and realising £600/9/3 (\$1200.92). Items deemed useful were transferred to the Peterborough Battery in 1963 and the remains of the motor and Battery machinery as well as the building and tanks were disposed of by tender. The Battery Reserve (Section 139) was sold in 1966 to J.R. White, the owner of the surrounding property; the land reverting to the original sections from which it was subdivided (Sections 36E, 36W).

All that remains on site at the time of writing are the ruins of two semidugouts, several concreted tanks, the remains of the stamp battery itself, and the weathered mounds of the tailings dumps.

SUMMARY OF PRODUCTION

From 1933 to 1954 the Mongolata Government Battery crushed 367 parcels of ore, further cyanided 188 of those parcels, and smelted an additional 6 parcels of bullion. The 367 parcels comprised of 7600 tonnes of ore from 55 sources (Table 1) which produced 318.250 Kg Au, giving an average grade of 41.875 g/t Au recorded. The 188 parcels of tailings that were cyanided totalled 4290 tonnes, and produced 32.326 Kg Au, giving an average grade of 7.535 g/t Au recovered.

The mines producing the major amounts of gold through the Mongolata Battery were the Byles Mongolata mine, which produced 107.222 Kg Au from 3520 tonnes of ore, yielding an average grade of 30.46 g/t Au, and the Takati/Takati South mine, which produced 83.29 Kg Au from 1052 tonnes of ore yielding an average grade of 79.17 g/t Au. One of the least successful mines was the aptly named 'The Duffer' mine, which produced only 0.018 Kg Au from a single parcel of 26.2 tonnes of ore, giving an average grade of .68 g/t Au recovered, while the worst return was from an unnamed alluvial claim belonging to a Mr L.R Scammell who only received 0.011 Kg Au from 25.4 tonnes of ore giving an average recovery of 0.44 g/t Au. The above extremes in production testify both to the "patchy" nature of the goldfield and the relative inexperience of the "miners" many of whom would seem to have just been seeking government assistance during the Great Depression of the 1930's.

The tailings from the Battery were stockpiled close to the treatment site, and were calculated to have an average grade of 2.80 g/t. However local sources claim that a large portion of the original 7600 tonnes of tailings was removed in the 1960's and used to repair roads in the vicinity of the township of Hallett. Horn and South (1988) estimated from survey data of the stockpiles that 3120 tonnes of tailings remain on site, with an estimated grade of 1.69 g/t Au, derived from assay data of hand augered drillholes.

CONCLUSIONS

The Mongolata Government Gold Battery was opened in 1933, closed in 1954, and eventually sold in 1966. During that time it treated 367 parcels of ore from 55 separate sources totalling 7600 tonnes, from which it produced 318.2489 Kg Au. Bullion smelted at the Battery returned an extra 1.0623 Kg Au.
